

A MASTERFUL SUCCESS STORY

AMFE incl. visualization at FESTOOL

MADE IN GERMANY - FOR ENHANCED FIRE PROTECTION TOO

With more than 2,700 employees, FESTOOL specialises in power tools for timber construction, joinery, painting and renovation, as well as paint preparation and finishing. The company has manufactured to the highest standards for over 90 years, with more than 80% of its products made in Germany. Fire protection is therefore essential for protecting employees and ensuring delivery capability.

FESTOOL has equipped the electrical cabinets of its production and logistics machinery with automatic AMFE miniature fire extinguishing units. In the event of a fire, the AMFEs can activate simultaneously, suppressing the fire immediately and without residue.

Operations can resume quickly after a fire because the extinguishing agent does not contaminate materials.

THE AMFE ENSURES SAFETY - effectively preventing, among other things:

- spread of fire (risk to people)
- equipment and conveyor downtime
- production and shipping outages
- loss of goods
- inability to deliver

THE AMFE - available at www.meister-automation.shop
