

A MASTERFUL SUCCESS STORY

Over 80 AMFEs and multialerts® in use at writing instrument manufacturer STAEDTLER

WE ARE THERE BEFORE THINGS GET HOT

STAEDTLER Mars GmbH & Co. KG is Europe's largest producer of wood-cased pencils, erasers, mechanical pencil leads and modelling clay, and the global market leader in industrial plasticine. Safety is a key priority. More than 80 electrical cabinets at its Nuremberg logistics centre require a networked fire protection solution that operates simultaneously and reliably. Our automatic AMFE miniature fire extinguishing unit and custom multialert® simultaneous activation solution enabled us to provide STAEDTLER with a high-quality, ready-to-use installation in record time - without interrupting operations!

In the event of a fire, the AMFEs or smoke detectors send an early signal to the multialert®, which then activates the AMFEs simultaneously and forwards an alarm to the central fire alarm control panel.

We are pleased to have played our part in ensuring the uninterrupted global distribution of writing instruments and look forward to continuing our collaboration.

THE AMFE CREATES A SPARK - effectively preventing, among other things:

- equipment downtime
- production and shipping outages
- loss of goods
- inability to deliver (worldwide in STAEDTLER's case)
- conveyor downtime

THE AMFE - available at www.meister-automation.shop
